Digital Literacy: Project Report

- **Name:** Manthan Awaya
- **Registration Number:** 25BAI11050
- **Branch:** B.Tech CSE(AI&ML)
- **Year:** First Year

- **Course Code:** CSE0001
- **Course Title:** Digital Literacy

Introduction

As a Student Digital Ambassador at VIT Bhopal University, my role is to assist peers in navigating the digital world, from creating professional profiles to communicating safely online. This project documents my journey through five modules of the Digital Literacy course, organized within a GitHub repository. The portfolio serves as a foundational resource for my academic and professional career, demonstrating my ability to use essential digital tools effectively and responsibly.

Task 1:

For this task, I created a visual infographic using **Canva** to educate my batchmates on the importance of digital literacy. My design covers three essential topics: Safe Internet Practices, Email Etiquette, and the definition of Digital Literacy itself. I used a clean, professional layout with high-contrast colors and icons to ensure the information is accessible and engaging for students.

The process of creating this infographic was enlightening. I found it particularly interesting to see how complex concepts like "digital footprint" could be simplified into three or four actionable bullet points. One difficulty I encountered was balancing the visual elements with the text; I had to ensure that the design did not become too cluttered while still providing enough detail to be useful. This exercise taught me that as a Digital Ambassador, visual clarity is just as important as the information being shared

Task 2:

- In this module, I established my professional digital presence by creating and updating profiles on **GitHub, LinkedIn, and Kaggle**. On GitHub, I set up a specialized profile README that highlights my current branch, year of study, and my primary learning objectives for my B.Tech degree. On LinkedIn, I updated my education section to reflect my status at VIT Bhopal, ensuring my expected graduation year is clear to potential internship coordinators.

- These platforms are not just for this assignment; they are tools I intend to use throughout my four year academic journey. I plan to use GitHub as a central repository for all my coding projects and hackathons, while LinkedIn will be my primary platform for networking with industry professionals and alumni. Kaggle will serve as a space for me to practice data science and compete in global challenges. Establishing these profiles now ensures that I have a consistent and professional digital footprint by the time I apply for placements

Task 3:

This task focused on two pillars of digital productivity: coding practice and cloud collaboration. For the coding component, I used **HackerRank** to complete a beginner-level Python challenge, which helped me familiarize myself with online judging environments. For the collaboration component, I utilized **Google Forms** to create a 5-question 'Digital Literacy Awareness Quiz'. This form includes both multiplechoice and short-answer questions designed to test a peer's knowledge of online safety.

These tools will be instrumental in my academic success. HackerRank provides a structured path to improve my problem-solving skills, which is vital for technical interviews. Meanwhile, Google Workspace tools allow for seamless collaboration on group projects, as seen with the linked Google Sheet for response tracking. Learning to manage these platforms now prepares me for the collaborative nature of the tech industry

Task 4:

As a Digital Ambassador, I drafted two professional emails: one requesting an assignment extension from a professor and another expressing interest in an internship. These drafts emphasize the importance of clear subject lines, professional greetings, and structured body text.

The communication scenario I analyzed involved a hypothetical situation where a student sent a demanding, informal email to a faculty member without a clear subject line. This led to a delay in the student's request being processed and a strained relationship with the professor. The key learning here is that professional communication is about respect and efficiency. By following standard etiquette, I can ensure my messages are taken seriously and that I represent VIT Bhopal professionally in all digital interactions

Task 5:

While researching **UPI/Online Payment Fraud** for my case study, I was most surprised by the psychological tactics used by scammers to bypass technical security. I learned that most victims are not "hacked" in the traditional sense; instead, they are manipulated into sharing their PIN or scanning a "receive money" QR code that actually debits their account.

This research has fundamentally changed my digital habits. I will no longer scan QR codes provided by strangers and will treat my UPI PIN with the same level of secrecy as a bank password. Furthermore, I have

committed to sharing the **National Cyber Crime Helpline (1930)** and the reporting portal **(cybercrime.gov.in)** with my batchmates to ensure that if a crime occurs, they know exactly how to report it immediately

Conclusion:

This project has been a transformative experience in understanding my role as a Digital Ambassador. I have moved beyond being a simple user of technology to becoming a responsible and professional digital citizen. By mastering tools like GitHub, Canva, and Google Workspace, and by understanding the nuances of professional communication and cyber safety, I am now better equipped for my B.Tech journey. The repository I have built is the first step in a career-long commitment to maintaining a professional, safe, and effective digital presence.
